

How To Choose A Useful Bachelor's Degree

Mr. Samir Al Baghdadi

The days of studying philosophy and other topics are over. In today's day and age, it's important to know how to choose a useful degree -- one that will serve you well throughout your career. Many people have spent tens of thousands of dollars to get a degree and then not using that career in the professional world.

When you decide to choose a degree, you need to find one that is practical. Regardless of whether you want to go into medicine, business, accounting, computers or any other subject, you have to be realistic about the career opportunities. Spend some time on the Internet to find out what options are available to you and then plan your degree accordingly.

More businesses want someone who is already knowledgeable about a particular subject. Training dollars have been drastically cut due to the economy around the globe. If a person doesn't have actual knowledge, they will be passed over for someone who does. You don't want that to happen to you, which means you need to look at where you can achieve hands-on training.

Community colleges are more advantageous for hands-on training than most traditional colleges and universities. The reason is smaller class sizes. If you were to take a course at a college, you would be one of a hundred students. With a class size that large, the only thing you can hope for is a lecture style classroom because anything else would be too hard to execute.

At a community college, class sizes are kept smaller and more intimate. You can look forward to more lab time and more hands on experience. It's possible for the professor to call you up and let you get your hands dirty. When you have this actual experience, it can prove that you are the right person for the job once you start making applications.

Employers want to see that you have actually done the stuff they want you to do -- not just read about it. This means that attending a community college can actually be the best thing for you. You can have practical knowledge of a subject and show that you are aware of how to do the job with firsthand experience.

There are many degrees that you can choose from and they all involve practical experience. You can choose computers and actually work on the hardware and software. You can choose accounting and actually work on financial records. You can even choose automotive mechanics and get grease on your hands from working on an engine.

Choosing where you get the degree is just as important as what degree you choose. The usefulness of your degree will depend on what you did to earn it. Did you read

about the concepts in a textbook or did you carry them out with your bare hands? When you eventually go to work somewhere, your employer will want someone who can do the work, not just talk about it.

Every degree that is earned should be able to provide job opportunities, yet that is not always the case. Psychology majors are often bartenders and marketing majors are often in sales. This is because people haven't learned how to apply their degree to the real world. If you are going to get a degree in anything, you have to be sure there is a market for the skills you are learning and be sure you know how to apply those skills.

You are going to spend money on a degree, so it needs to be a useful one. You can find out how to be sure you make money by paying attention to the courses and how they are taught. If you don't get the hands on learning that you need, you have to question whether it is truthfully going to be a useful degree or not. A degree has to provide hands on learning otherwise you won't be able to prove that you are knowledgeable about any topic to a potential employer.

Some quick steps to help:

1. Research your desired career
2. Find out about education requirements
3. Get hands on classroom training
4. Get a degree that matters
5. Show off skills to future employers

Finding a useful degree is as simple as you make it out to be. The school you choose has to be a top consideration because the hands on training is what employers look at today. If you cannot show that you have more than just book knowledge, you will be passed up again and again on career opportunities. This can be avoided by choosing a degree that works in today's ever-changing business world.
